

Grow Program: Plug Production

The Nature's Source Difference: Nature's Source plant foods are high efficiency nutrition formulated with oilseed extract, an all-natural and renewable source of plant nutrition. The low salt formulations enhance nutrient uptake by the plant.

Feeding Recommendations

Water seeded trays thoroughly with Nature's Source 10-4-3 or 10-4-5 at 250 ppm N, a Direct Inject setting of 1:500. Continue to apply through the mist system every morning for the first 3-4 cycles. Mist the rest of the day with clear water.

Stages 2 and 3: Increase the mist rate to 300 ppm, a Direct Injector setting of 1:400. Increase the number of mist cycles to 5-6 daily to provide more nutrition as the plugs continue to develop.

Optional:

- 1) Nature's Source Foliar Essentials can be applied as a foliar mist starting in propagation and on through the growing cycle of the crop. This application encourages a more compact growth habit with increased tone and enhanced nutrient uptake. Apply at a rate of 1 gallon per 100 gallons of water (1 oz per gallon) every 7-10 days, to meet desired plant size.
- 2) Pre-plant or at planting, or any stage thereafter, you may include an application of Plant Probiotic. Rate: ¼ lb. per 50 gallons.

Nature's Source Benefits: Plugs grown with Nature's Source will be full of energy and nutrition, without salt stress for improved transplant success.

Many Growers report more toned, compact plugs with shorter growing time and enhanced root development.
